

DRP Week 3

Iterative Development

The Imperial-RCA DRP Coordination Team:

Mark Wheelhouse mjw03@imperial.ac.uk

Carolyn Runcie carolyn.runcie@rca.ac.uk

with Software Engineering input from:

Ivan Procaccini ip1914@imperial.ac.uk

Summer Term Outline

Spring Week 11: HCD Lectures – Discover & Define
Application Framework Tech Talks
HCD Workshop (Friday)

Summer Weeks 1 - 3: Exams

Summer Week 4: DRP “Project Inception” Week - Elevator Pitches
HCD Lectures – Storytelling, User Experience & Prototyping

Summer Week 5: DRP “Concept Development” Week - Milestone Reviews
HCD Lectures – Systems and Services
Introduction to Law for Computer Science - Lectures

Summer Week 6: DRP “Iterative Development” Week - Milestone Reviews
Introduction to Law for Computer Science - Case Study TRA

Summer Week 7: DRP “More Iterative Development” Week - Milestone Reviews

Summer Week 8: DRP Final Demonstrations & Presentations
DRP Project Documentation Deadline

Project Roadmap

In other words, before you start getting 'agile', make sure you are building the right things.

Incrementally Approach Solution

Iterative Development is **not** a railroad!

Pivot To Solve a New Problem

Don't be afraid to explore
the solution space

Iteration Planning

Overall Theme

- describe the general area of your problem you are working on this week (e.g. “actionable feedback” or “assessment moderation”)

User Journeys

- describe how a user experiences your problem and how they can interact with your service to solve or improve things

User Stories

- describe specific moments of a user’s interaction with your service, highlighting their needs and the benefits you offer

Iteration Planning

Individual User Stories take this approximate format:

CONNEXTRA TEMPLATE

As A <SOMEONE>

I WANT TO <DO SOMETHING>

SO THAT <SOME RESULT OR BENEFIT>

@RIVERGLIDE

Describe something your user wants to achieve, and why.
Then implement something to solve that problem.

Iteration Planning

The screenshot displays a Jira board interface. On the left, a list of user stories is shown under the 'User Requirement' filter. The 'Refresh-Safe Data' story is highlighted with a red box. A red line connects this box to the detailed view of the story on the right.

Refresh-Safe Data

Open Issue created 11 months ago by Jamie Willis

User Story

As a marker, I am worried about losing my data during a long code review; I need to be sure that my progress will survive technical issues.

Evidence

Argggghhhhhh!!!!

Mark Wheelhouse, about 15 times during the final project DRP milestone

When I'm using the WiFi, my laptop sometimes refreshes, or crashes, which means I lose my progress on the review. As a result, I keep all my notes on a separate system and copy them in at the end.

Mark Wheelhouse

1 Participant

IMPERIAL

Walking Skeleton

Fat Horizontal Layers

The “old” way

Sometimes developers specialise on a particular layer / technology

Development on different layers can get out of sync

Not the most efficient way when we seek user feedback and quick iteration

Thin Vertical Slices

There is a better way

Better to develop features using more of a “full stack” approach

Develop just enough in each layer to implement the feature end-to-end

If anything, let the front-end lead the back-end development. The user can't give feedback on things they can't see.

Presenting feedback

Milestone 1 (*Ideation*) - DRP28

Please find your collated feedback from each of your markers below.

Green Feedback

This feedback relates to things you did in this milestone that the markers think was good (**keep it going!**)

- I think you've got a good basis for a project at the moment: the idea has potential!

Amber Feedback

This feedback relates to things you should improve moving forward, or that you should bear in mind for your final presentation.

- The issue is that it's clear that you really haven't gone out of your comfort zone when talking to people: half of the interviewees are just from DRP12! You've effectively surveyed four of your friends, which is not going to work well at all for getting the kinds of feedback that DRP needs. You *need* to start having **authentic interactions** with your stakeholders!

Red Feedback

This feedback relates to things that the markers think needs urgent attention before next week, or very important for final presentation.

- The opportunity statement is really ill-formed here: you've got the problem statement, but without a clear guidance, you're going to struggle to keep the tutors on board for subsequent weeks.
You can't keep relying on static surveys as a medium for collection, or chatting to a small sample of your friends.

“The feedback could use some visual cueing (colouring) to more clearly show which feedback is good or bad”

“The text layout is far too wide, which makes the feedback hard to read”

“Will the students know what Red, Amber and Green mean?”

Milestone 1 (*Ideation*) DRP28

Collated feedback from each of your markers

KEEP DOING

Things you did well in this milestone: **keep it going!**

I think you've got a good basis for a project at the moment: the idea has potential!

NEEDS ATTENTION

Things you should improve moving forward, or bear in mind for your final presentation.

The issue is that it's clear that you really haven't gone out of your comfort zone when talking to people: half of the interviewees are just from DRP12! You've effectively surveyed four of your friends, which is not going to work well at all for getting the kinds of feedback that DRP needs. You *need* to start having **authentic interactions** with your stakeholders!

PRIORITISE FIXING

Things that need urgent attention before next week, or are very important for your final presentation.

The opportunity statement is really ill-formed here: you've got the problem statement, but without a clear guidance, you're going to struggle to keep the tutors on board for subsequent weeks.

You can't keep relying on static surveys as a medium for collection, or chatting to a small sample of your friends.

KEEP DOING

Things you did well in this milestone: **keep it going!**

I think you've got a good basis for a project at the moment: the idea has potential!

“Surely the priority feedback should be presented first? That’s what students need to focus on”

“Can we make the feedback from the different tutors more clearly separated? That grey bar is a bit hard to see”

PRIORITISE FIXING

Things that need urgent attention before next week, or are very important for your final presentation.

Milestone Review Session Advice

Weekly Design Progress Prompts

Before **showing your design progress**, re-anchor the audience in the problem you are addressing, the user needs behind it, and the design rationale guiding your decisions.

1 Project reminder

What is the problem, who is the user, and what is the solution trying to do?

Our project addresses **[problem experienced by target user]**.

Our solution aims to help users **[main value proposition / core outcome]**.

2 Focus of this week

What specific functionality, journey, or design decision are you showing today?

This week, we focused on **[specific functionality / journey / design element]** that should allow the user to **[task/action]** so that they can **[user outcome]**.

We developed this because: **[design rationale]**

3 What we tested

What did you test, and how?

We tested whether users could **[task]**

We used **[method: task-based usability test / concept feedback / interview / walkthrough]** with **[participants]**.

4 What we learned

Summarise your key findings and the evidence behind them

We learned that users **[finding 1]**, **[finding 2]**, and **[finding 3]**.

The strongest evidence was **[quote / behaviour / repeated confusion / successful task completion]**.

5 What we changed/ will change

How did the testing inform iteration? List what you will keep, change, or test further based on your evidence.

Based on this, we decided to **keep [x]**, **change [y]**, and **test further [z]**.
